

BI-01.43 Required system health checks before mobile equipment operation - information for operator by vehicle type specifying: access and escape, alarms, fire suppression, auto shutdowns and other relevant protective systems

(Accountable - Project Lead (Unassigned))

Expectations

Required protective system health checks before operation are documented and communicated in a style that is appropriate for the audience.

Specify

The training for personnel carrying out system health checks includes vehicle specific information related to:

- Cabin integrity
- Cabin housekeeping (loose objects)
- Use of seatbelts, restraints and interlocks
- Rescue and escape devices
- Emergency escape
- Auto shutdown
- Other relevant information about protective systems

Implement

Trainers reinforce the key requirements for conducting inspections and checks on fire controls on mobile plant for maintainers and operators.

Monitor

Training system records confirm currency of vehicle operator skills and knowledge for carrying out prestart checks

Supervisors and maintainers review prestart records

Maintenance reports confirm that faults are being corrected.
