

BI-02.07 Regular checking and maintenance of brakes, steering and tyres

(Accountable - Engineering Manager (Site) (Unassigned))

Expectations

There are minimal brake, steering and tyre failures on operating mobile equipment.

Specify

Maintenance strategies related to brakes, steering, tyres and tyres are in place for all vehicles on site - with regular visual checks, measurements (with tolerances), and replacement of components scheduled based on OEM recommendations and identified site specific risks.

Implement

Work orders for equipment on site are completed in a timely manner - and brakes, steering, tyres and running gear are given a higher priority - with potentially more frequent proof testing and replacement.

Monitor

Maintenance planners close out work orders when confirmed as completed and prepare regular status reports on work order status for equipment on site.
