

# BI-02.09 Regular checking and maintenance of alarms and monitors

*(Accountable - Engineering Manager (Site) (Unassigned))*

## Expectations

There are minimal alarm and monitor failures on operating mobile equipment.

## Specify

Maintenance strategies related to alarms and monitors are in place for all vehicles on site - with regular visual checks, measurements (with tolerances), and replacement of components scheduled based on OEM recommendations and identified site specific risks.

## Implement

Work orders for equipment on site are completed in a timely manner - and alarms and monitors in cabins are given a higher priority - with potentially more frequent proof testing and replacement.

## Monitor

Maintenance planners close out work orders when confirmed as completed and prepare regular status reports on work order status for equipment on site.
