

BI-02A.30 OEM Designs provide for installation of fire detection and suppression systems

(Accountable - Engineering Manager (Site) (Unassigned))

Expectations

Industry project

OEM equipment is designed so that:

- Fire suppression systems can be readily installed, maintained and are protected during normal operations and maintenance.
- Installed fire detection and suppression systems remain functional and can be activated during the first phases of an equipment fire i.e. they are not the first system to fail.

Specify

OEM equipment designs provide details of:

- Interfaces between detection and suppression systems
- Piping and wiring runs

Implement

Industry working group

- Provision for bulkhead plugs
- Equipment system data interface

- factory fitting - so that fire detection and suppression systems are fully integrated

Monitor

To be developed
