

BI-09.06 Site spill response

(Accountable - Operations Manager (Unassigned))

Expectations

Sites have a credible spill response capability.

Specify

Sites should have formal processes for identifying and reacting to any spills of (potentially) hazardous/flammable chemicals. Identified credible spill response requirements should be included in emergency preparedness considerations (and associated resources, training modules, etc.)

The site spill response planning includes:

- Spill response kits
- Training and awareness
- Reporting

Implement

Operational and maintenance personnel should be trained and resources maintained.
