

BI-09B.02 General Fire Training

(Accountable - Operations Manager (Unassigned))

Expectations

All workers at the mine have a basic understanding of fire prevention including first response.

Specify

All workers at the mine have a basic understanding of fire prevention including a practical use of the site available suppression systems and fire extinguishers.

Implement

Workers are trained and assessed for competency covering:

- Basic fire theory
- Basic fire prevention methods
- Practical use/drills on fire suppression/fighting
- Understanding underground fire potentials
- Using first response firefighting equipment, including portable extinguishers and installed suppression systems
- Fire behaviour in the underground environment, including ventilation, methods for reporting fires
- Emergency response including the use of self-rescuers and refuge chambers

Monitor

Training management systems confirm currency of general fire awareness and response skills for all workers on site.

Worker audits conducted by supervisors and managers confirm understanding of fire awareness and response skills.
