

## CFM-MN-03 Fuel is introduced to mobile equipment - inadequate maintenance standards

During normal operations an external fuel source, introduced during maintenance ignites through contact with a hot surface such as a turbo charger, exhaust etc.

Caused by:

- rags
- grease
- solvents and degreaser
- flammable containers or
- other material left in engine bay

Credible Failure mode is addressed by:

- 🛡️ BI-01.13 Clear maintainer performance management expectations supported by an active and consistent performance management process
- 🛡️ BI-01.51 Skilled and experienced personnel are accountable for maintaining mobile equipment
- 🛡️ BI-02.02 Maintenance requirements cover all safety and operational systems on mobile plant
- 🛡️ BI-02.40 Introduction and Control of Materials on Site
- 🛡️ BI-05.04 Regular and consistent application of performance management processes
- 🛡️ BI-09.06 Site spill response
