

CFM-OP-02 Solid fuel - components present on mobile equipment become fuel

Equipment is operated outside equipment design limits:

- Loosening components allowing them to move and contact hot surfaces
- Insulation and heat deflecting components are lost during operations allowing previously protected components to become a fuel source through exposure to hot surfaces

Credible Failure mode is addressed by:

- 🛡️ BI-02.31 Operator prestart checks include brakes, steering, tyres and running gear
- 🛡️ BI-03.02 Operators follow site parking requirements
- 🛡️ BI-04.02 Appropriate system for scheduled inspections including structured checklists and defect reporting
