

BI.00.21 Strategy for testing, reviewing and maintaining the currency of the emergency response plan

(Accountable - Operations Manager (Unassigned))

Expectations

Emergency response planning is a well-established business process that includes mobile equipment tyre incidents.

Specify

Establish emergency response plan with a review cycle that is an accountability of a senior organisational position. Requirements for emergency responders being called and how they should respond to a wheel assembly/tyre incident should be documented and included in site procedures and training modules.

Implement

Emergency responders are trained in depth and all site personnel are given awareness training around the requirements for raising and responding to tyre/wheel assembly related incidents. Records of drills includes responses to mobile equipment tyre issues.

Monitor

Emergency responders should have their skills assessed around tyre and wheel assembly related response requirements. Regular drills should be conducted and the results of the drills reported on and analysed as part of a regular monitoring program for mobile plant.
