

BI-02D.21 Underground Mobile Equipment is speed limited

Expectations

Where required underground equipment speed is effectively governed and is designed to be tamper proof.

Specify

Confirm speed limiting specifications by equipment type and its application e.g. a tractor unit used in man hauler application has a higher speed than a tractor unit configured as a forklift.

Check that speed limiting design requirements have been met at the site delivery acceptance and commissioning check steps.

Implement

Speed limiting of mobile equipment is confirmed at each step of the process and confirmed at commissioning.
