

BI-02P.02 Regular checking and maintenance for cabin integrity, restraints, access and escape, auto shutdowns and other relevant protective systems

Expectations

The protective systems on site approved mobile equipment remain functional.

Specify

Maintenance strategies related to cabins and passenger restraints are in place for all vehicles on site - with regular visual checks, measurements (with tolerances), and replacement of components scheduled based on OEM recommendations and site duty requirements.

Implement

Work orders for equipment on site are completed in a timely manner - and cabin integrity, restraints, and emergency egress items in cabins are given a higher priority - with potentially more frequent proof testing and replacement
