

# BI-02P.07 Prestart radio checks

## **Expectations**

The communications equipment required for the safe and productive operation of mobile equipment is confirmed as working. Mobile equipment that cannot communicate does not operate.

## **Specify**

Vehicle operators carry out prestart checks that include confirming radios and/or other communication devices are working and set on the correct channel.

Where radio faults are detected at prestart checks and during operations the site process to follow is well defined.

## ***Implement***

Vehicle operator training in the use of radios and communication equipment includes how to conduct prestart checks.

Prestart records confirm that checks of communication devices are completed.
