

BI-02P.08 Regular checking and maintenance of brakes, steering and tyres

Expectations

Mobile equipment brakes (including propulsion elements on electric drive vehicles), steering and tyres on site approved mobile equipment are monitored and well maintained.

Specify

Maintenance strategies related to brakes, steering, tyres and tyres are in place for all vehicles on site - with regular visual checks, measurements (with tolerances), and replacement of components scheduled based on OEM recommendations and site duty requirements.

Implement

Work orders for equipment on site are completed in a timely manner - and brakes, steering, tyres and running gear are given a higher priority - with potentially more frequent proof testing and replacement.
