

BI-03T.01 Ceasing Operations Procedure - compromised operating environment

Expectations

Sites should have cease operations processes (Trigger Action Response Processes/Plans) in place for situations for when it is no longer safe to continue normal operations using mobile equipment.

Specify

Procedures in place for compromised operating conditions

Develop and implement a process to cease operations in situations where it is no longer safe to operate mobile equipment:

- Failure of roadways e.g. slumps, washouts, sink holes
- Actual or potential geotechnical failures
- Fires and smoke
- Floods
- Precipitation: snow, sleet, rain, hail etc.
- Dust
- Temperature extremes
- Infrastructure potential or actual failure
- Potentially explosive(e.g. methane rich) atmospheres
- Falls of ground
- Seismic events
- Loss of ventilation
- Animals etc.

Implement

Training and assessment in requirements for vehicle operators, supervisors and management
