

BI-04P.04 Vehicle entering a work area positive communications protocol

Expectations

All personnel operating vehicles remain alert and situationally aware when working in congested areas.

Specify

Communications requirements detail vehicle entry requirements to congested work areas e.g. loading

At a minimum these requirements cover:

- Work area delineation (where to stop and queue etc.)
- Radio (or other communications) call up protocols
- Following signs
- Confirming that communication has been received

Implement

Training and Assessment in requirements for Positive Communications for Entering a Work Area requirements included in generally delivered modules (e.g. Induction) and reinforced in Vehicle Operation modules. Start of shift or similar briefings should identify intended active haul circuits / work areas and include guidance information on the area owners and required communication to occur prior to entry into these areas.

Permanent or mobile signs for call up requirements.
